1 PA1 Report

File size	Size (bytes)	Transfer time (seconds)
10 KB	10,240	0.130
1 MB	1,048,576	0.128
10 MB	10,485,760	0.145
50 MB	52,428,800	0.345
100 MB	104,857,600	0.553
500 MB	524,288,000	2.675

Table 1: Total client run time for bin file transfers with a 5000 byte chunk size.

Visually it's immediately apparent that the runtime doesn't scale linearly with the size of the binary file. For file sizes 10MB and under, the runtime was more or less the same. When the file size got to 100MB, the run time was about 4 times larger. When the file size was 500MB, the run time again multiplied by almost five times larger. These results are consistent with the client having to make more and more requests to transfer the chunks of data.

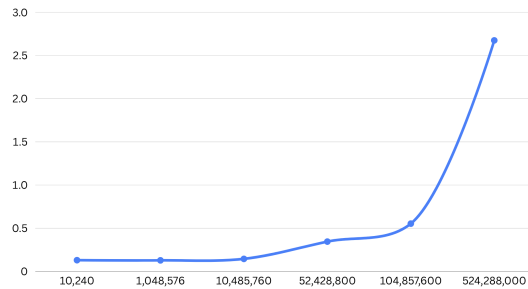

Figure 1: Graphical representation of the table above. y-axis is (seconds), x-axis is (bytes)
